naorchid@aol.com

ABSTRACT

The Wild Orchids of North America, North of Mexico (Brown & Folsom 2003) has served as an illustrated and annotated checklist of the orchids of that region. In the years since research was completed for that work, many new taxa have been described, as well as other pertinent facts published that required five corrections to the original manuscript. In Part I, those additions and corrections, including literature references and photographs, were presented to enable the reader to update this volume to the end of 2005. This current paper contains additions, emendations, and eight new combinations through March 2020.

RESUMEN

Las Orquídeas Silvestres de América del Norte, Norte de México (Brown y Folsom 2003) ha servido como lista de verificación ilustrada y anotada de las orquídeas de esa región. En los años transcurridos desde que se completó la investigación para ese trabajo, se han descrito muchos taxones nuevos, así como otros hechos pertinentes publicados, así como la necesidad de cinco correcciones de hecho al manuscrito original. En la Parte I esas adiciones y correcciones, incluidas referencias bibliográficas y fotografías, se presentaron para permitir al lector actualizar este volumen al cierre de 2005. Este documento actual contiene adiciones, enmiendas, y ocho nuevas combinaciones hasta marzo de 2020.

Since the previous Additions and Corrections to *The Wild Orchids of North America, North of Mexico* (Brown 2005), fourteen new species and three varieties have been described, several older forms revived, numerous new combinations published, range extensions noted, recent rediscoveries of 'lost' species made, and significant publications presented. Whether one accepts all of the subspecific taxa is not the point of this publication. These taxa have been described and are present in living material and therefore deserve some recognition. Recent reassessments of older generic concepts and ongoing molecular work have resulted in several transfers and new combinations. Whereas this is not intended in any way to be a revised edition of *The Wild Orchids of North America north of Mexico*, those combinations and transfers, (although in some cases a more accurate assessment of the individual taxon) are usually listed as synonyms, with literature references, under the appropriate species. Additions and emendations are arranged in original page order of *The Wild Orchids of North America, North of Mexico*.

Page 2

Delete: *Amerorchis rotundifolia* (Banks ex Pursh) Hultén

small round-leaf orchis

Amerorchis has been subsumed into *Galearis* p. 42.

Page 157

Couplet 6: replace *Harrisella* with *Dendrophylax*

Page 158

Couplet 17a: replace *Maxillaria* with *Camaridium*/
Heterotaxis

Page 159

Couplet 29 add: plants of Big Bend National Park; flowers
to 1 cm, lips prominent...*Greenwoodiella*

Page 160

Insert in couplet 36: plants of rocky slopes in western New
Mexico...*Microthelys*

Page 161

Couplet 53b: replace with *Galearis*

Page 162

Couplet 59b: replace *Listera* with *Neottia*

Page 163

Couplet 73a: replace *Listera* with *Neottia*

Coupler 78a: replace *Pteroglossaspis* with *Orthochilus*

Page 163**Key 4**

Change *Cleistes* to *Cleistesioipsis*

Emend couplet 1a to read: plants of inland piedmont and
mountains...*C. bifaria*

Plants of coastal areas...*C. oricamporum*

Key 5

Replace *Coeloglossum* with *Dactylorhiza*

Key 6

Couplet 10: insert: lip with median stripe; faint dots...*C.*
maculata var. *gigas-dormiens*

Key 8

Insert into couplet 13: dwarf plants of northern Alaska
eastward to northwestern North Dakota...*C. parviflorum*
var. *exiliens*

Key 10

Insert before couplet 1: plants transcontinental, flowers
green to suffused with purple; lip notched...*D. viridis*

Key 16

Emend couplet 4b to read. *H. arizonica*

Add to 3b...*H. parviflora*

Key 19

Emend generic name to *Neottia*

Key 23

5a delete var. *blephariglottis*

Emend couplet 5b to read *P. conspicua*

Add to couplet 13 lip deeply lacerate and frilly...*P. shriveri*

Emend 22a to delete var. *obtusata*

Emend 22b to read:...*P. oligantha*

31b inflorescence a slender spike with distinctly yellow
lips...*P. yosemitensis*

33b leaves clustered on lower third of plant; lips narrow
and descending...*P. tescamnis*

Couplet 37 emend to read: transcontinental; plants of
northern North America

Key 27

Emend 1a to read *S. paludicola*

Emend 2a to read *S. lanceolata*

Key 28

Note.—For some years the *Spiranthes cernua* complex has been viewed as a compilospecies with gene flow from the various geographic areas of eastern North America resulting in distinctive morphologies (Sheviak 1991). The current work of Pace and Cameron (2017) has determined that these geographic morphs are apparently valid species. Identifying some of these can be difficult and the reader is referred to their paper for detailed information, line drawings, and photographs. Even with this help, some plants can prove to be problematic.

Couplet 16

Divide *S. odorata* into: lip white or pale cream; plants widespread on Southeastern Coastal Plain...*S. odorata*

Lip with a prominent yellow (rarely green) central portion, plants of southwestern Florida...*S. triloba*

Add: lip white; local endemic of southern Arkansas and adjacent Oklahoma...*S. niklasii*

Following 19b

This revised key to the *S. cernua* complex may help in identifying specimens.

1a: spikes uniformly single-ranked (often one-sided); lateral sepals widely spreading on either side; lip yellow-green; southern states...2

1b: spikes generally multiple-ranked; lateral sepals held in close proximity to petals, or less widely spread; lip white, yellow, or green...3

2a: flowering August–September; lateral sepals often oblique; endemic to burned grasslands in central Florida...*S. igniorchis*

2b: flowering October–December; lateral moderately oblique or more widely spreading; more widespread...*S. longilabris*

3a: spikes single-ranked, often tightly coiled; lip yellow; lateral sepals disjunct from petals; petals and sepals somewhat down curved; Northeast or Nova Scotia...*S. casei* (I might also describe habitat)

3b: spikes generally multiple-ranked, if single ranked not tightly coiled; lip yellow, white, or green; petals and sepals usually not down curved...4

4a: flowers clearly tubular; lip typically a strong yellow or orange; sepals spreading and incurved; leaves often absent during anthesis...*S. magnicamporum*

4b: flowers tubular or of a different shape; lip ranging from white to yellow/green; sepals spreading or appressed to petals, not usually incurved; leaves present or absent during anthesis...5

5a: stem leaves present; lateral sepals somewhat separated from the remainder of each flower; spikes clearly arranged into three vertical columns...*S. ovalis*

5b: stem leaves generally absent (but not always); lateral sepals separated or not separated from the remainder of each flower; spikes not arranged into straight columns...6

6a: lip with strong yellow or green coloration...7

6b: lip with weaker yellow coloration or pure white...9

7a: plants of dry, typically northeastern locations; lip with strong butterscotch yellow coloration (especially underneath)...*S. ochroleuca*

7b: plants of wet, typically southern habitats; lip generally yellow to green in color, sometimes faint; leaves especially large, often present on stems themselves...8

8a: endemic to Florida, but potentially present in bordering states; lip with strong yellow-green coloration; papillae present...*S. triloba*

8b: found in southern states, including Florida; lip with weaker yellow-green coloration; papillae absent...*S. odorata*

9a: flowers cubical; lateral sepals down curved, fairly wide; primarily northeastern distribution...*S. arcisepala*

9b: flowers not cubical; lateral sepals sometimes thinner, appressed, incurved, or spreading slightly; northeast or elsewhere...10

10a: lip white; local endemic of southern Arkansas and adjacent Oklahoma; leaves withering...*S. niklasii*

10b: lip white-yellow; found within the range of the aforementioned or elsewhere...11

11a: lip generally faint yellow or white; flowers typically nodding, wide-ranging throughout eastern North America...*S. cernua*

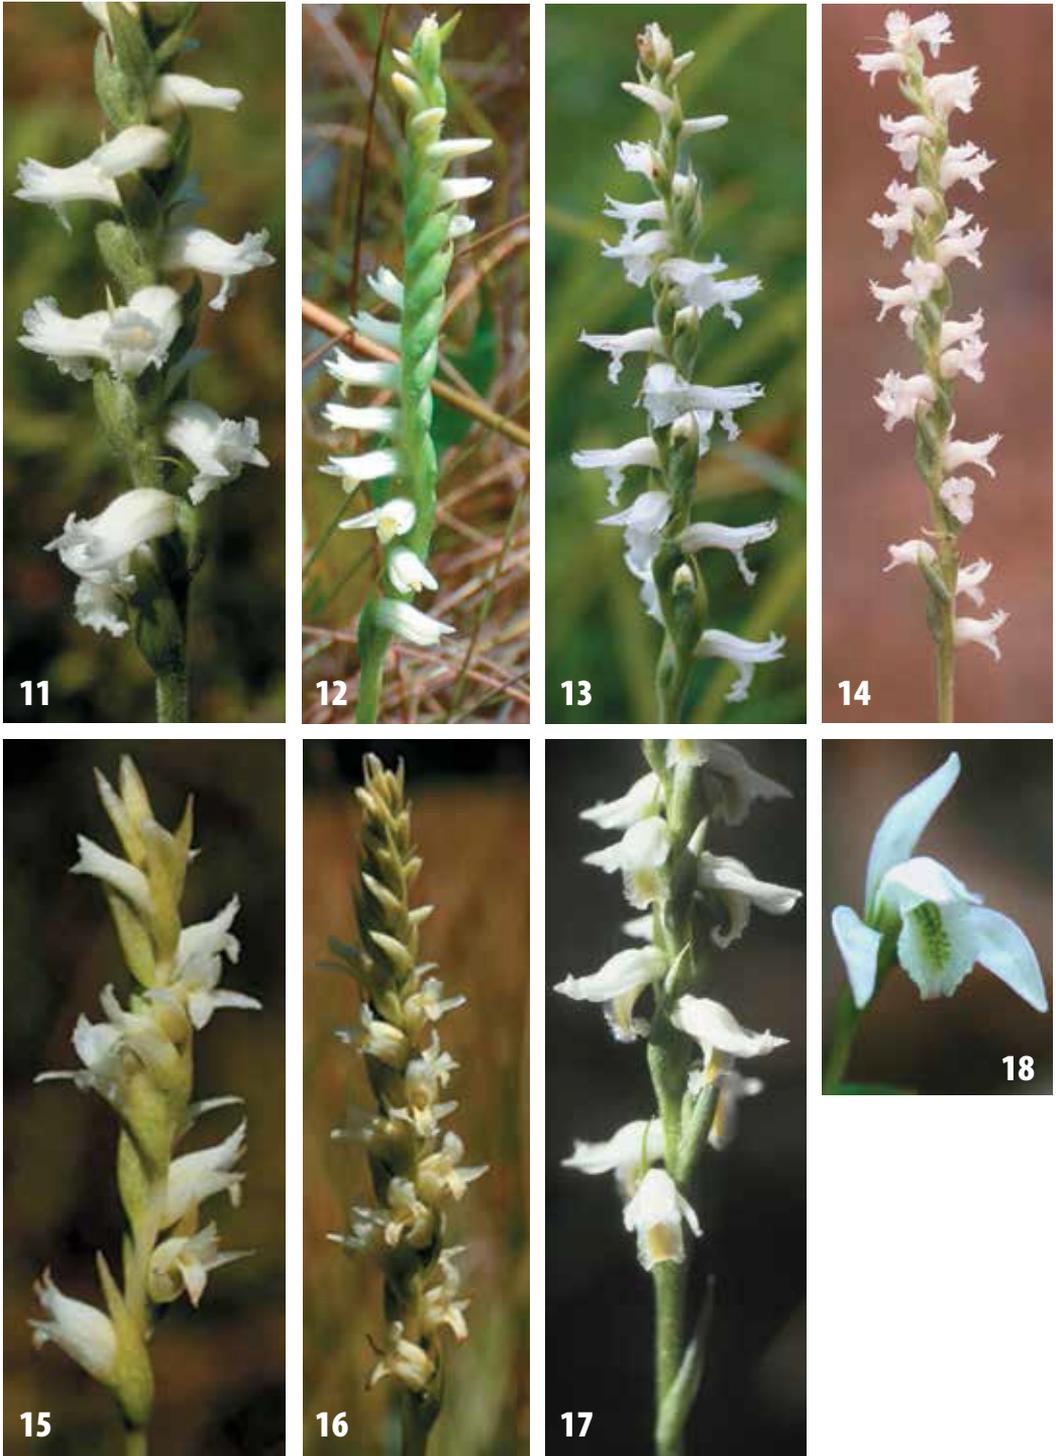

11b: lip generally a pale yellow or of stronger coloration; flowers typically ascending (plants of northeastern North America)...*S. incurva*

ACKNOWLEDGMENTS

I am grateful to Stan Folsom for his line drawings, Gerardo Salazar for his assistance with *Greenwoodiella*, Steve Orzell for facilitating a photograph of *Spiranthes igniorchis*, John Gange for helpful comments on the revised key to *Spiranthes cernua* complex, and to reviewers John Gange, Bob Ferry, and Jim Fowler for their comments. Barney Lipscomb, editor of *JBRIT*, has been especially helpful in facilitating the layout and publication.

Note.—A limited number of reprints of the part 1 are still available and are designed for insertion into *The Wild Orchids of North America*, *North of Mexico* are available from the author. Copies of the book are also available from University Press of Florida (www.upf.com).

New photo credits in this publication: Tania J. Hernández-López: *Greenwoodiella deserticola*; Adam Cousins: *Corallorhiza maculata* var. *gigas-dormiensis*; James Cheak: *Spiranthes igniorchis*; Dick Pike: *Triphora trianthophoros* var. *texensis*.
